

Raighne Weng

SENIOR BACKEND DEVELOPER

China

✉ raighne.weng@gmail.com | 🏠 raighne.xyz | 📧 raighnew | 🌐 raighnew

“Building reliable systems at scale—from domain modeling to production observability.”

Summary

Senior Backend Developer with 7+ years of experience designing and building scalable distributed systems, payment platforms, and developer-facing APIs. Proven track record of leading architecture decisions across microservices, Kubernetes infrastructure, and CI/CD pipelines. Experienced in driving end-to-end delivery from system design through production observability, with a focus on reliability, performance, and clean domain-driven codebases.

Skills

Languages	TypeScript, Python, Go
Backend	gRPC, REST API Design, Domain-Driven Design, Event-Driven Architecture, TDD
Data	PostgreSQL, Redis, MongoDB, Elasticsearch, SQS, Kafka
Infrastructure	Kubernetes, Helm, Terraform, Docker, GitOps, CI/CD (GitHub Actions), Kong Gateway
Cloud & Observability	AWS, GCP, Grafana, Prometheus, OpenTelemetry
Frontend	React

Experience

WorkStream (California-based HR/Payroll Platform)

Remote

SENIOR BACKEND DEVELOPER

Jul 2024 – Present

- Own architecture and delivery of time-tracking and scheduling features for a growing US-based HR and payroll platform.
- Design and implement high-throughput backend services handling complex payroll calculation workflows with strict data integrity requirements.
- Drive technical decisions on API contracts, data modeling, and service boundaries in collaboration with cross-functional teams.
- Contribute to engineering best practices including code review standards and testing strategies.

Datature (AI Vision Startup)

Singapore

BACKEND DEVELOPER

Aug 2022 – Jun 2024

- Designed and built the public API platform and Python SDK from the ground up, enabling external developers to programmatically manage assets, annotations, and ML model training/deployment.
- Architected backend services on GKE with auto-scaling, achieving high availability for latency-sensitive ML inference workloads.
- Built Kong API Gateway layer with custom Lua plugins for authentication, rate limiting, and request transformation—reducing abuse incidents and improving API stability.
- Established CI/CD pipelines with automated testing, rolling deployments, and rapid rollback capabilities on Kubernetes.

StoreHub (New Retail Startup, Series A USD 8.9M)

China

BACKEND DEVELOPER

Mar 2019 – Aug 2022

- Architected a unified payment service integrating TNG, Stripe, and GrabPay with a polymorphic provider pattern, powering transactions across POS terminals and e-commerce channels.
- Led the migration from monolith to microservices on Kubernetes, improving deployment frequency and reducing inter-team coupling.
- Applied Domain-Driven Design to decompose the payments bounded context, resulting in clearer ownership and faster feature delivery.
- Championed Test-Driven Development practices across the team, improving code coverage and reducing production incidents.

Projects

Kubernetes Platform Engineering

INFRASTRUCTURE & OBSERVABILITY

- Designed a production-grade Kubernetes deployment platform with Helm charts, GitOps workflows, and Terraform-managed infrastructure.
- Built end-to-end observability stack with Grafana dashboards, Prometheus metrics, and alerting—enabling proactive incident detection and reducing mean time to resolution.
- Authored custom Kong Lua plugins for adaptive rate limiting under traffic spikes, protecting downstream services from cascading failures.

Payment and Payout Service

STOREHUB

- Designed a provider-agnostic payment abstraction layer using polymorphism, enabling seamless onboarding of new payment providers with minimal code changes.
- Applied Domain-Driven Design to model payout reconciliation workflows, ensuring financial accuracy across multiple payment channels.

Developer Tools & Automation

DATATURE

- Built CLI tooling in Python for API integration workflows, reducing repetitive manual operations for development teams.
- Contributed to internal platform libraries for standardized logging, error handling, and service bootstrapping across microservices.

Education

Hunan Institute of Technology

BACHELOR'S DEGREE IN COMMUNICATION ENGINEERING

- Graduated with strong foundation in engineering and computer science.

China

2013 – 2017
